DIGITAL LIQUID LAMINATES  
Water based clear protective coatings  
for inkjet vinyl media

### DIGI PRIMER

#### Description

**Digi Primer** is a water based clear primer that can be used to improve the adhesion of UV Digi Clear and Graffiti Proof on digital prints. It has been developed because the adhesion of digi clear onto prints using the new generation eco solvent inks is inferior.

#### Use

Digi Primer is water based and therefore can only be used on substrates, inks or pigments that are **not** water sensitive. It can only be used as a primer and must be overcoated with UV Digi Clear or Graffiti Proof.

#### Surface Preparation

It is important that the printed surface has had time to dry to allow the solvents from the ink to evaporate. Generally no surface preparation is required, but if the surface is contaminated then a wipe over with a damp cloth prior to application may help.

#### Application

This product is very thin and has a tendency to foam on application. Do not shake the bottles of Digi Primer. Invert or rotate them a couple of times before use. The best method of application is spraying or using a paint pad applicator. Brushing and rolling agitates the liquid and may cause bubbles.

**Pad Applicator** – These are made of a fine fabric attached to foam and are available in many different sizes and configurations. The pad glides over the surface without creating bubbles. One coat is sufficient.

**Spraying** – HVLP or Conventional. Use a 2 mm fluid tip and 280 – 420 KPa (40-60psi) Apply a light mist coat to seal the print and allow to flash off (10 to 20 minutes) then apply another light coat.

### **Drying**

Do not apply if the temperature is below 10 deg. C or in high humidity.  
Allow to dry for at least one hour. The primer will remain tacky and must be overcoated with UV Digi Clear or Graffiti Proof.

### **Thinning and Cleaning**

If thinning is required use clean water only. Clean equipment with water. Methylated spirits will soften the Digi Primer and assist clean up.

### **Availability**

Ex Stock 4 litre, 1 litre and 500 ml bottles.

### **Testing**

The digital print market is continually changing, with new substrates and inks being offered on a regular basis. As the methods and conditions of application and use of this product are beyond control of Vipond's Paints Pty. Ltd. it is recommended that the customer tests the product thoroughly for their own particular application.
